IT Security Assessment, Ethical Hacking and IT Security Consulting

Bulletproof provides IT security assessment services, including network vulnerability and penetration testing (ethical hacking) and assessments of your information security processes. Bulletproof also provides IT security consulting services. A well-designed and functional IT security program aligned with your company's business objectives can help drive an effective and efficient organization while protecting the confidentiality, integrity and availability of assets and information.

Payment Card Industry PCI:DSS

Bulletproof can assist with all of your PCI requirements, from the completion of a self-assessment questionnaire or a report on compliance, to conducting a gap assessment against the current PCI:DSS standard. Bulletproof has PCI-Qualified Security Assessors (QSAs) on staff who can complete these assessments.

Source Code Security Audit

A secure source code review provides a fully automated process (with manual review) to identify potential security vulnerabilities in the source code of an application. This review process is an integral part of a comprehensive application security program. Secure source code review entails identifying coding flaws and design errors that put data and operations at risk before deployment.

ISO 27001 Information Security Management Systems Assessment and Certification

Bulletproof provides third-party audit and certification of your information security processes against the ISO 27001 standard and can provide your organization with the ISO 27001 certification. Bulletproof also provides assessment services which are designed to assist an organization in developing a new or enhancing an existing information security program/framework to align with the ISO 27001 standard with the ultimate goal of achieving the ISO 27001 certification.

Please see our "SECURITY as a SERVICE" literature for information on our Digital Forensics & Incident Response and other Security Services.
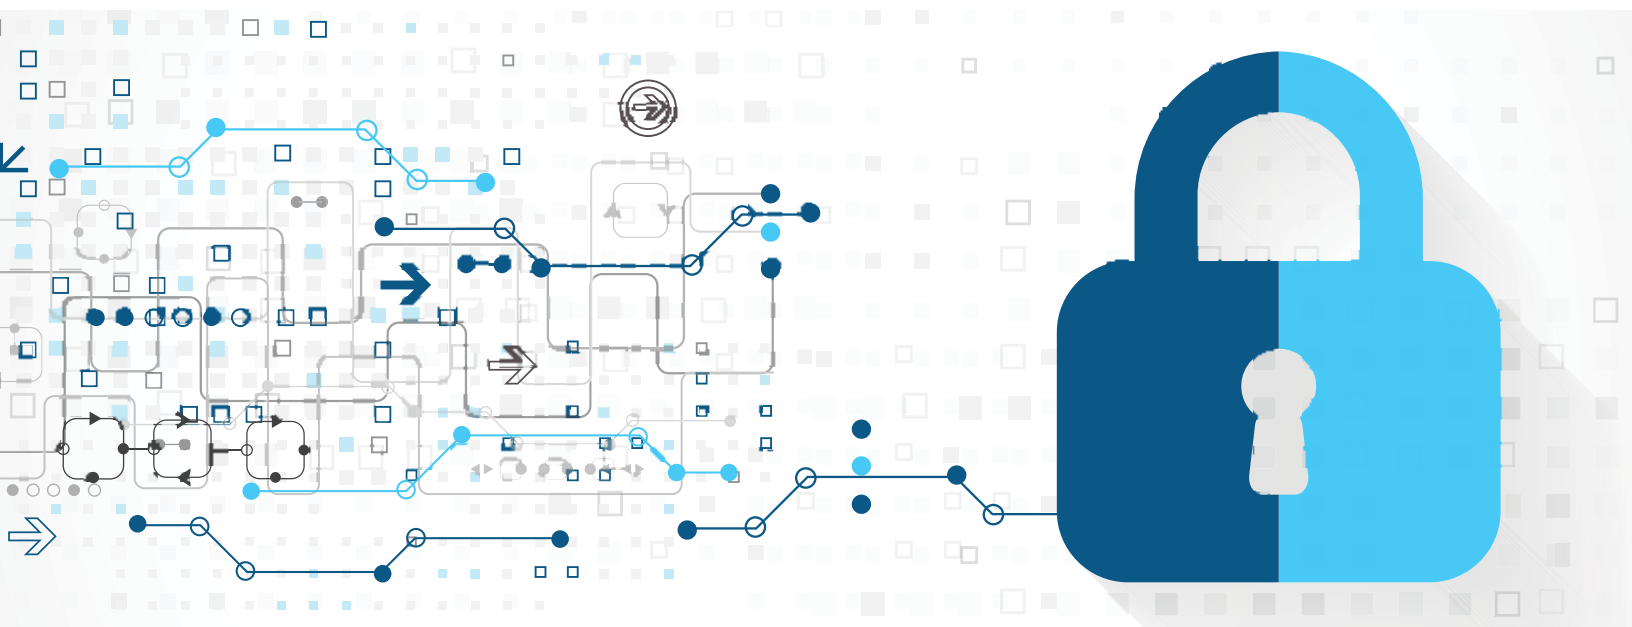

Bulletproof has been providing value to our clients since 2001 and we want to be your Trusted IT Provider. We offer a suite of services including IT/Cybersecurity Services, Professional and Managed Services, as well as Education Services.
